

ENHANCED CELL RANGE IN TIME DIVISION DUPLEXED UTRAN**Abstract**

5 In a UTRAN operating time division duplexing, one time slot 22(11) in each frame is maintained in a no-transmit condition, all preceding time slots 22(1) to 22(10) being uplink time slots and all succeeding time slots 22(12) to 22(15) being down link time slots (or vice versa). Cell size is markedly increased.
